

# **amfori BEPI Environmental Consulting Activity**

How It Works

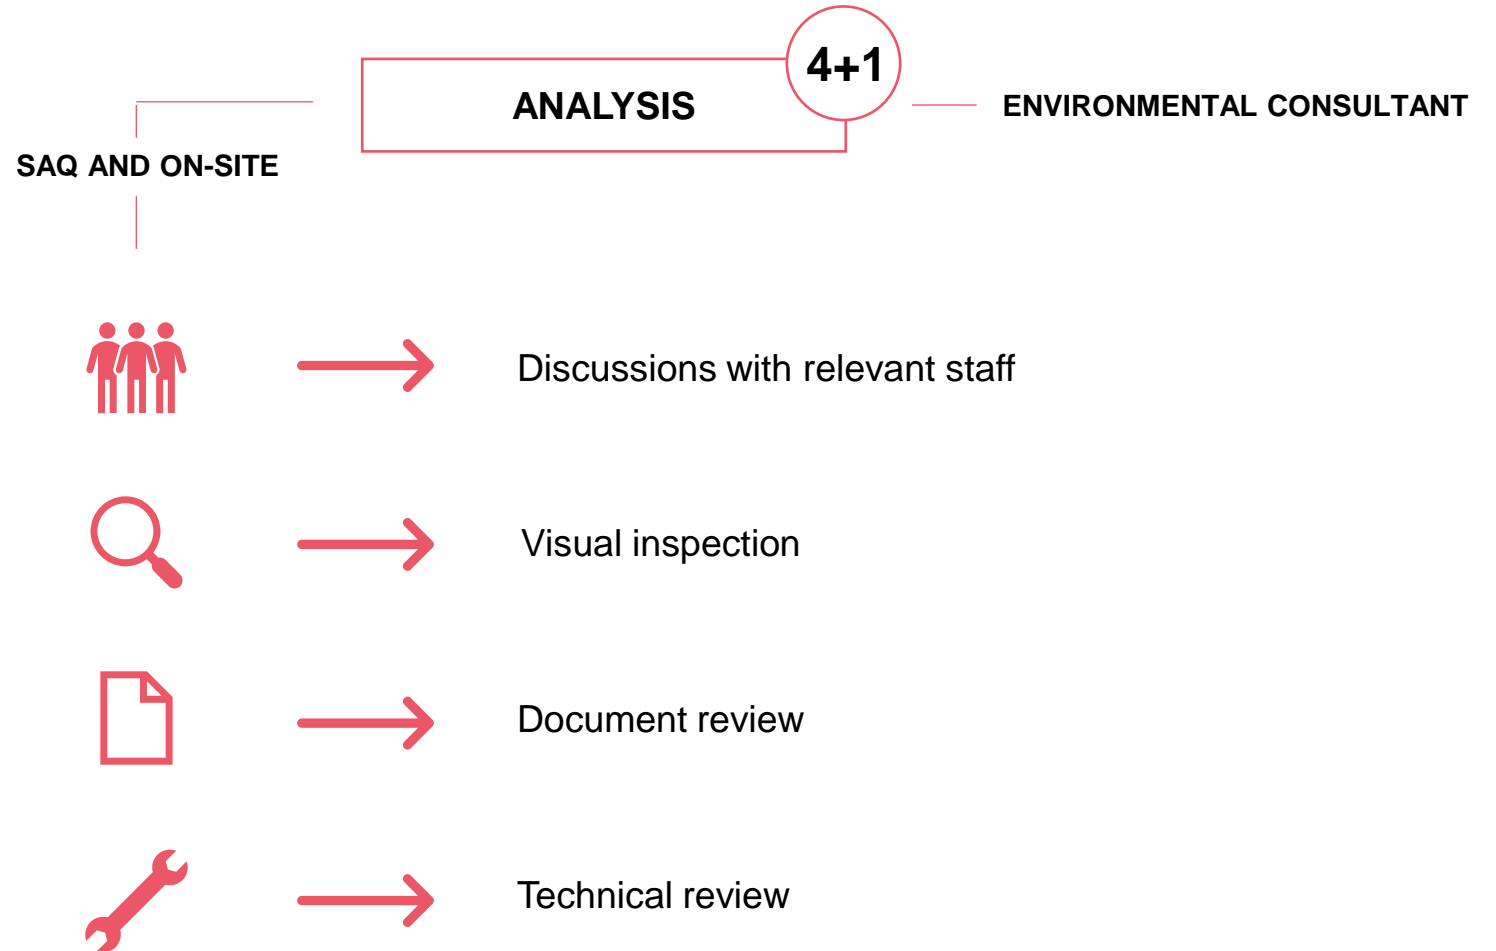

# How It Works – Environmental Consulting Activity

The main vehicle available in the amfori BEPI System is the **amfori BEPI Environmental Consulting Activity**, aimed at improving environmental management and performance at producer sites through **local support** and **capacity building**.

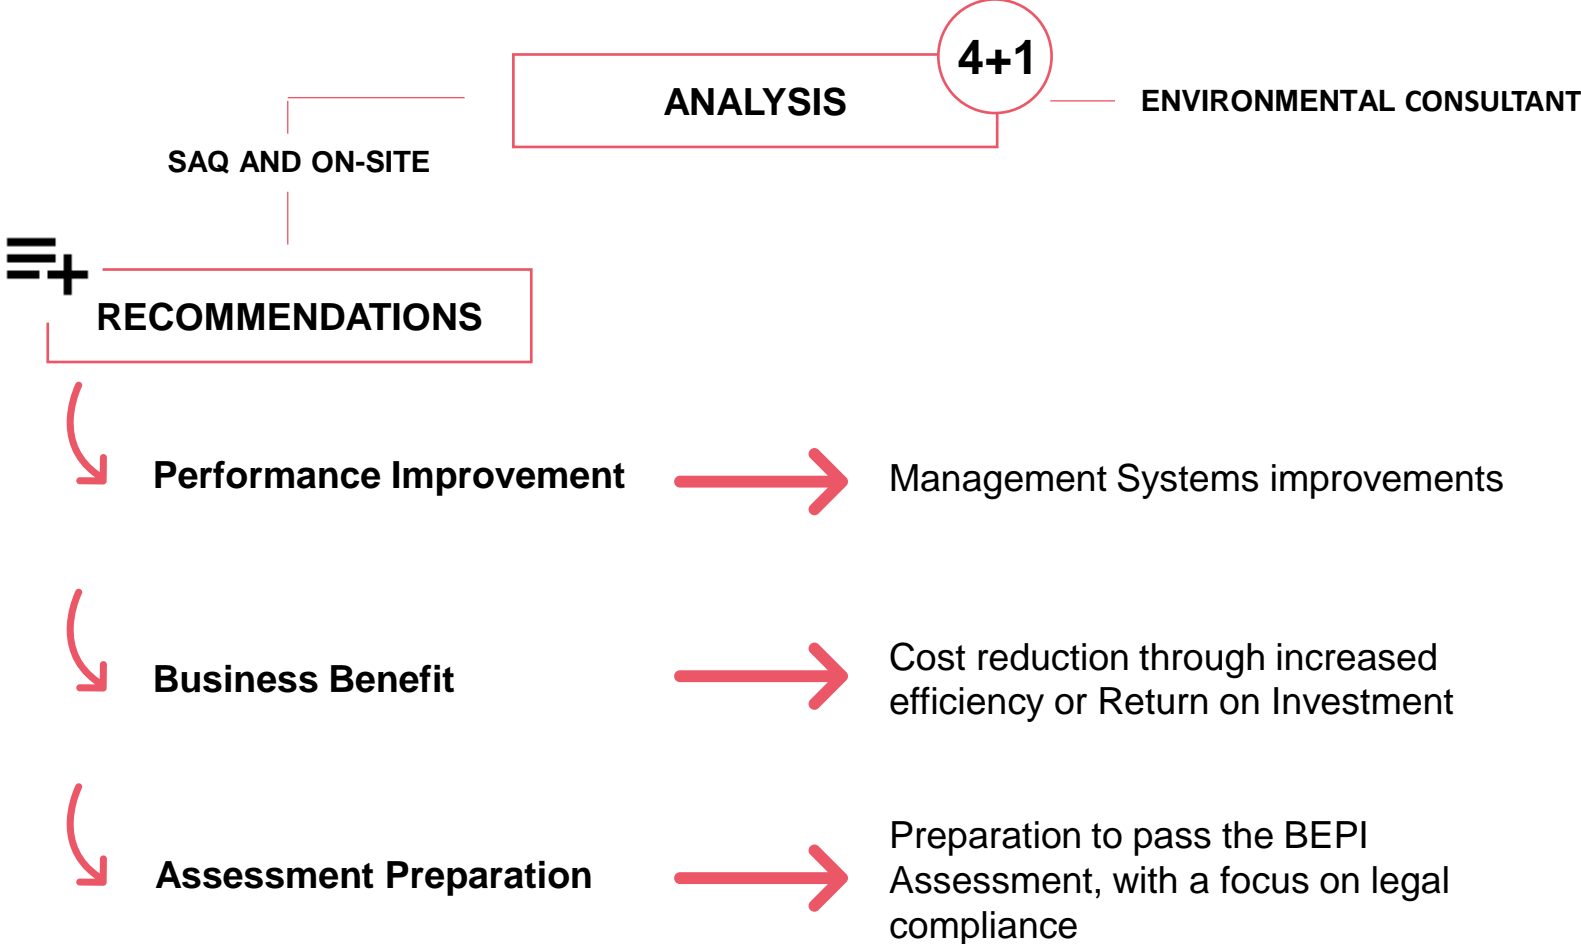

# How It Works – Environmental Consulting Activity

A BEPI recognised local environmental consultant conducts an **analysis** of the location, through review of the self-assessment (SAQ) and an on-site visit, across the most impactful environmental areas

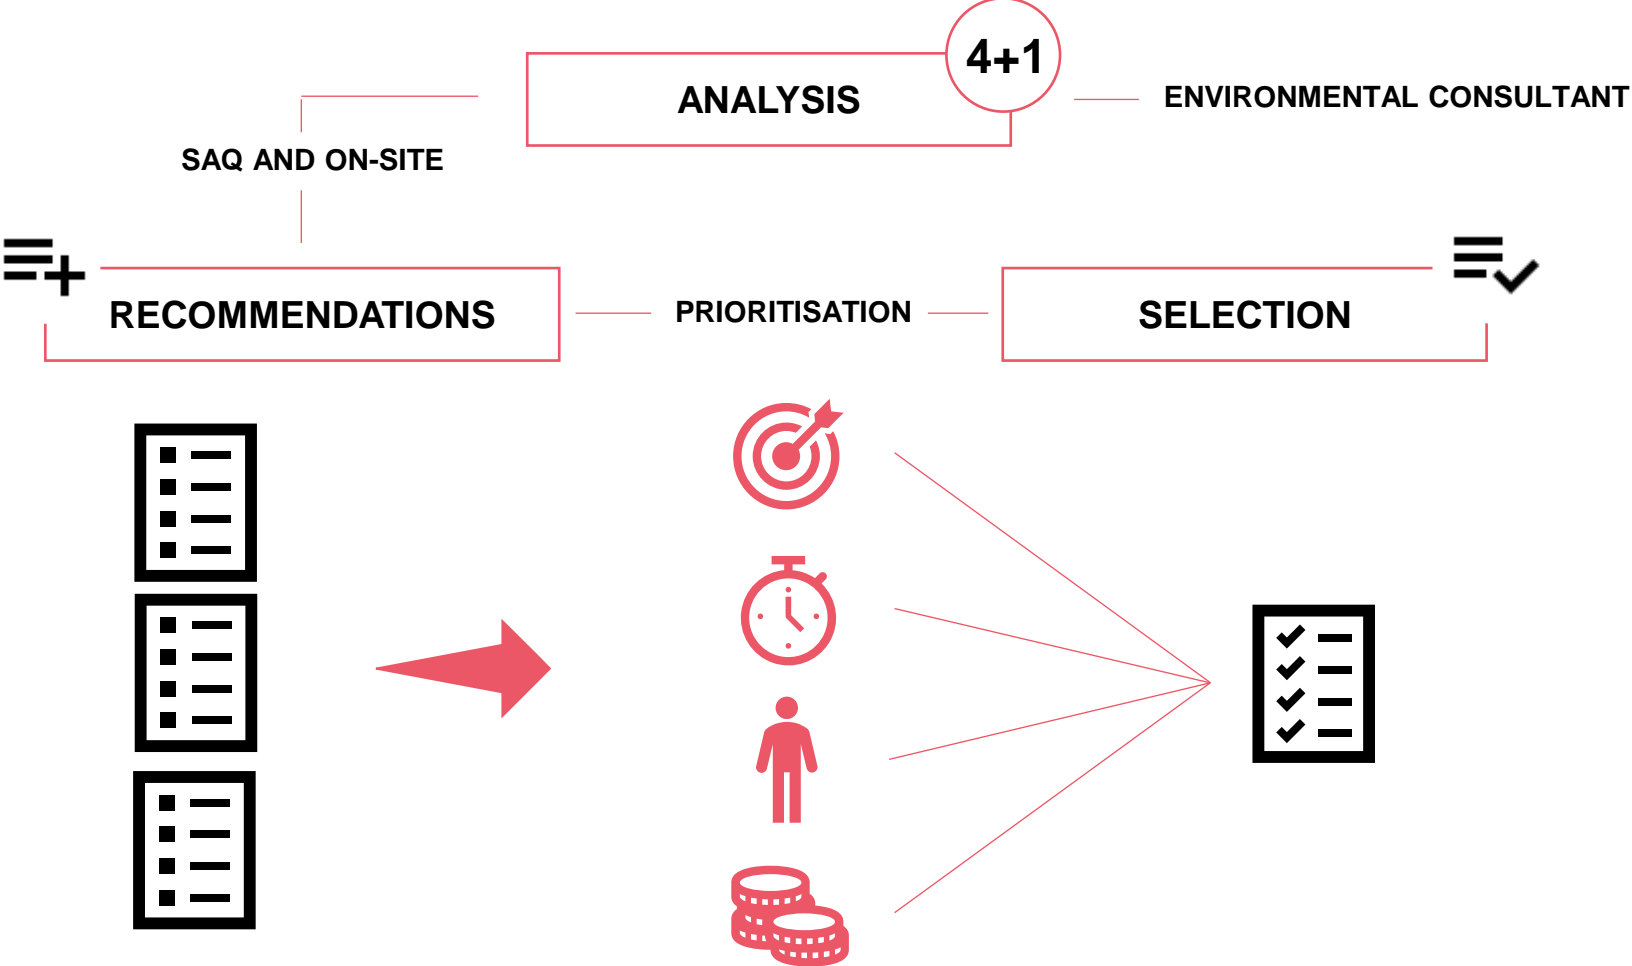

# How It Works – Environmental Consulting Activity

Based on the analysis, the consultant will draft a list of **recommendations** for environmental improvements

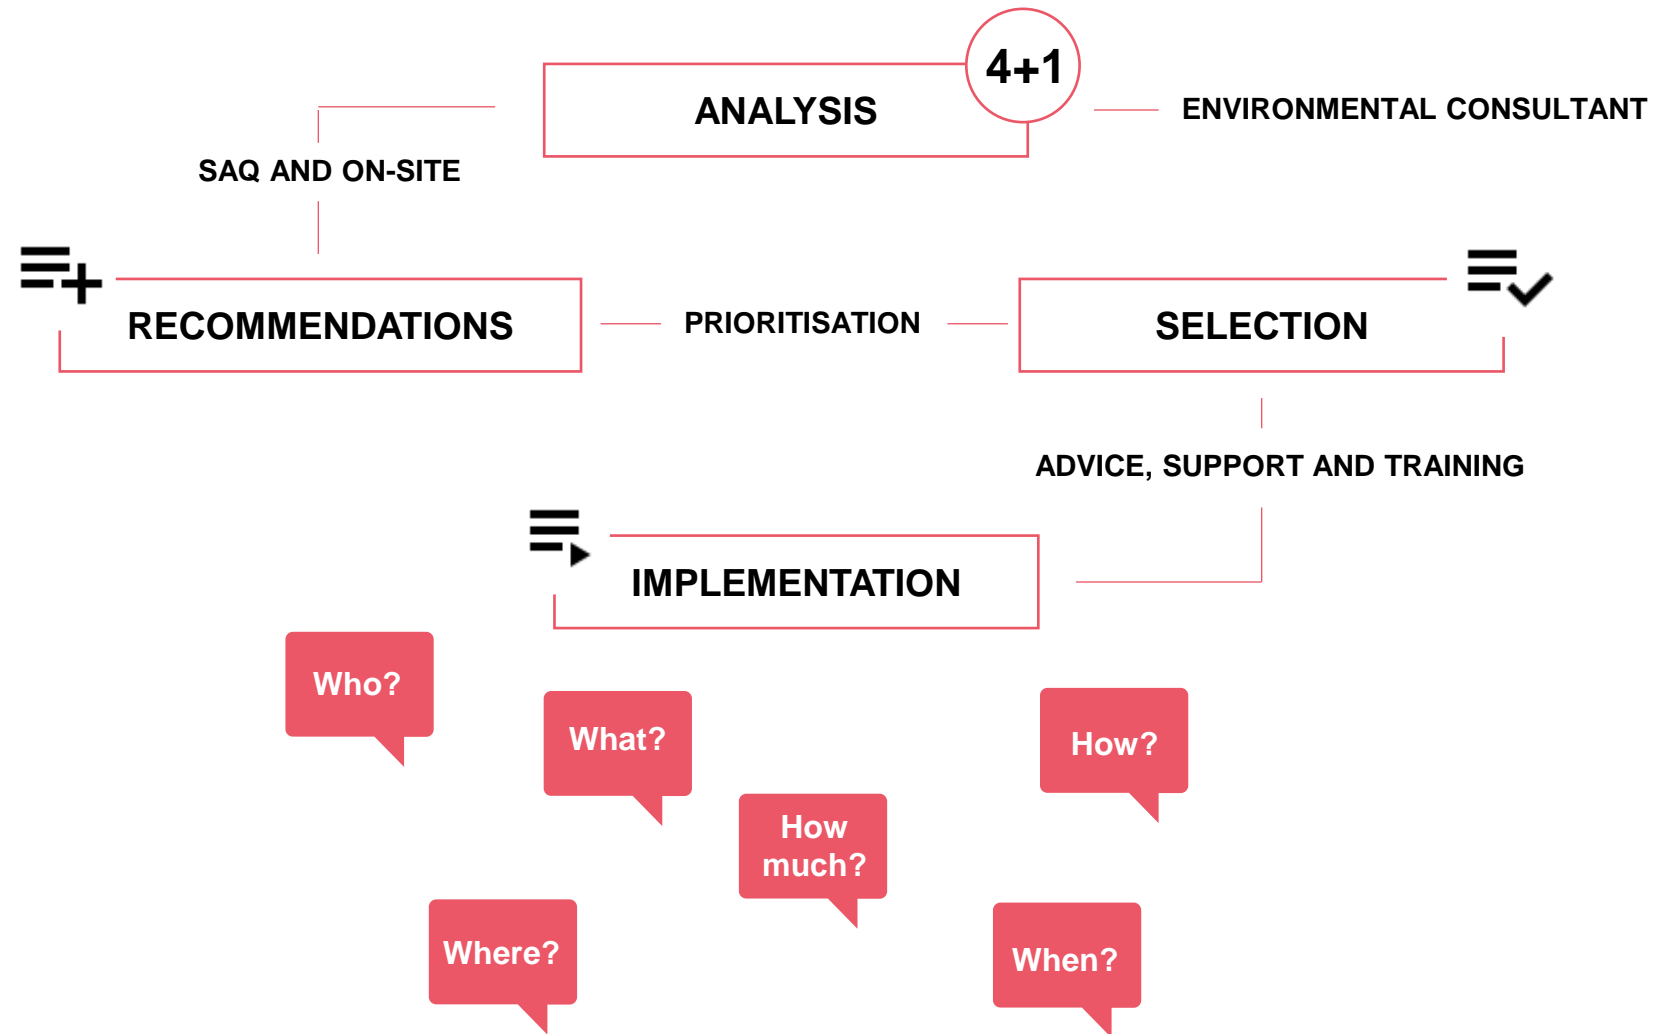

# How It Works – Environmental Consulting Activity

From the list of recommendations, the consultant and the producer will make a **selection** of improvements to be implemented, based on potential impact, available time, people and budget

# How It Works – Environmental Consulting Activity

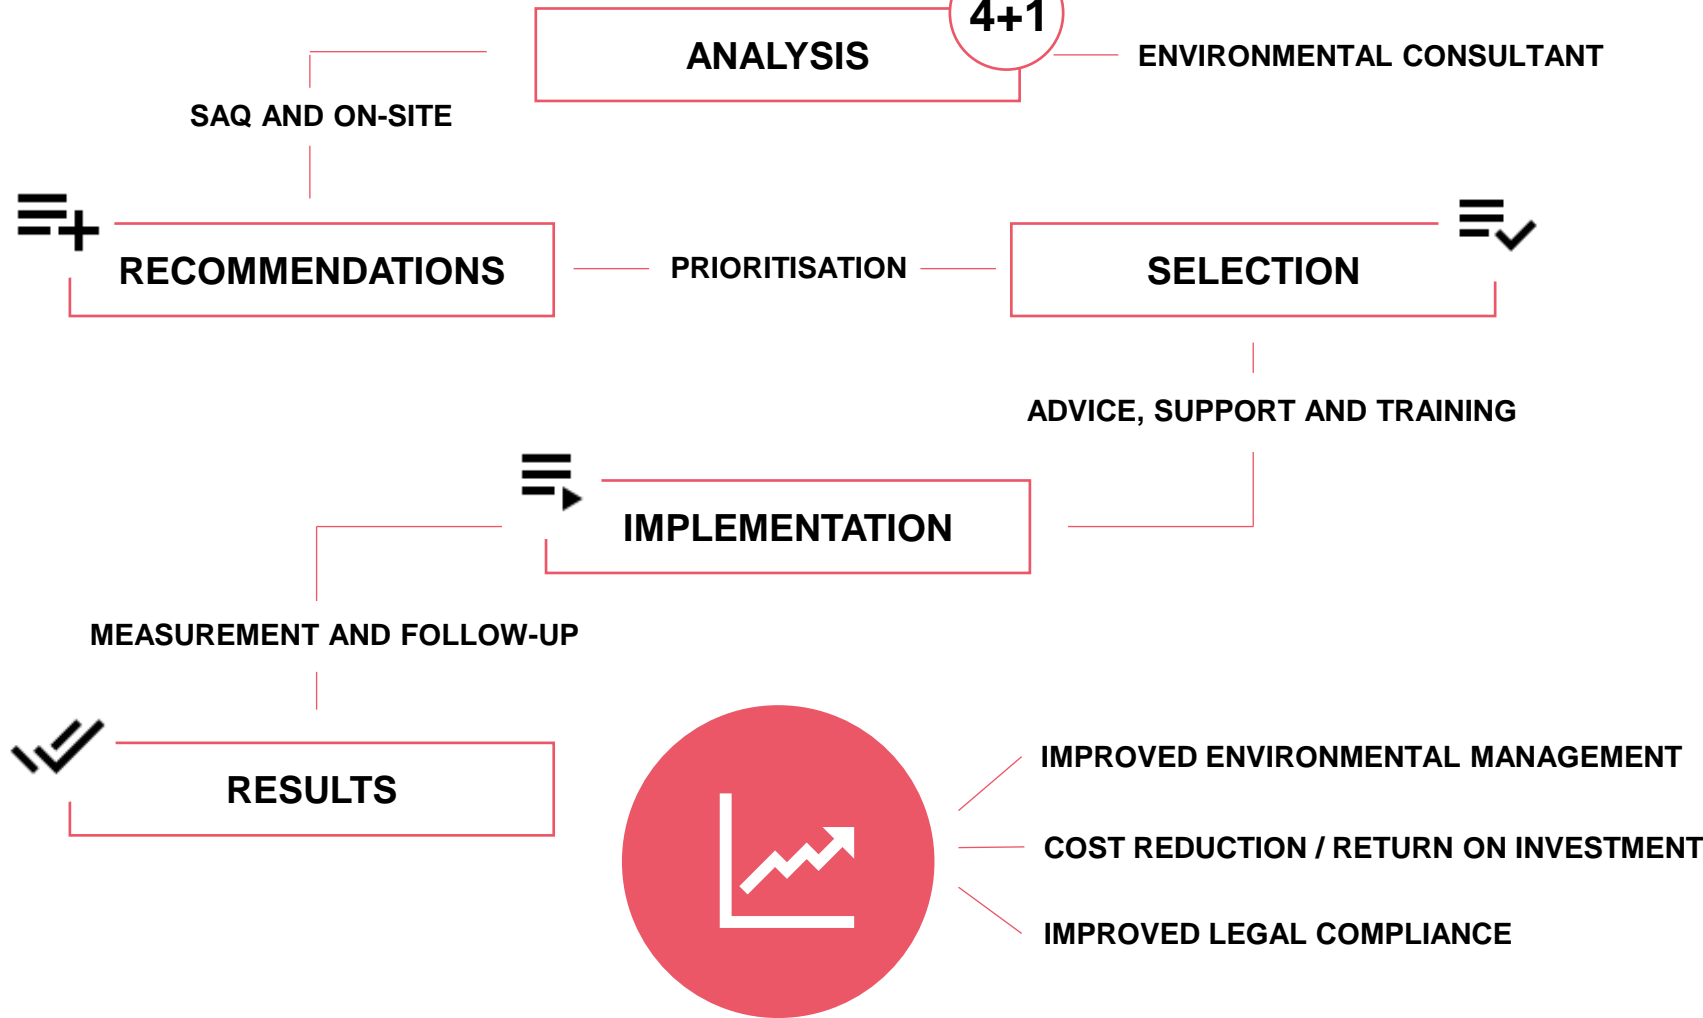

The consultant will provide advice, support and training to the producer for the **implementation** of the selected improvements

# How It Works – Environmental Consulting Activity

consultant support and customer encouragement will drive the producer to successfully implement improvements with tangible and measurable **results** at the end of the process

the entire process is supported in the **amfori BEPI Platform**, facilitating every step and providing amfori BEPI Participants with easy access to their supply chain's efforts and progress
